

THE NEW AUTOMATIC ID PHOTO BOOTH WITH DIGITAL TECHNOLOGY

Easy Viso is the latest evolution coming from the experience of the Italian leader in identification through digital photography.

Directly deriving from the traditional automatic ID photo booth, this knowhow has been masterfully reinterpreted using the latest digital technologies.

The new booth from the VISO series allows the customer to interact with the machine, to choose their favorite expression and pose on video, before printing. It can deliver products for official documents such as photos for US and European* passports (in conformity with ICAO standards), photos for ID cards, for the new driving license and other identification documents. The multilingual interface with vocal and graphic instructions allows the customer to easily browse through all the options and complete the desired product with astonishing speed.

The high-definition digital camera, dye-sublimation printers and highly resistant photographic paper with a lifespan of over 20 years guarantee the quality approved and recognized for years throughout the world for use on official identification documents.

In Italy, the relevant ministries of the Interior and of Transport have imposed this approval for the classic ID photos since the 1960's, now renewing it for digital photos. Furthermore, the special versions made for institutional purposes such as Service Cards, use at the Department of Motor Vehicles and CIE offices through computer connections, allow the image to be captured automatically and transmitted in remote broadcast, in conformity with ICAO standards for use on identity cards, driving licenses and passport applications. The VISO series uses green printing technology to ensure, along with the rapidity and service, the respect for the environment.

* Only some ID photobooths are enabled. For more information: 06-93026870.

HIGHLIGHTS

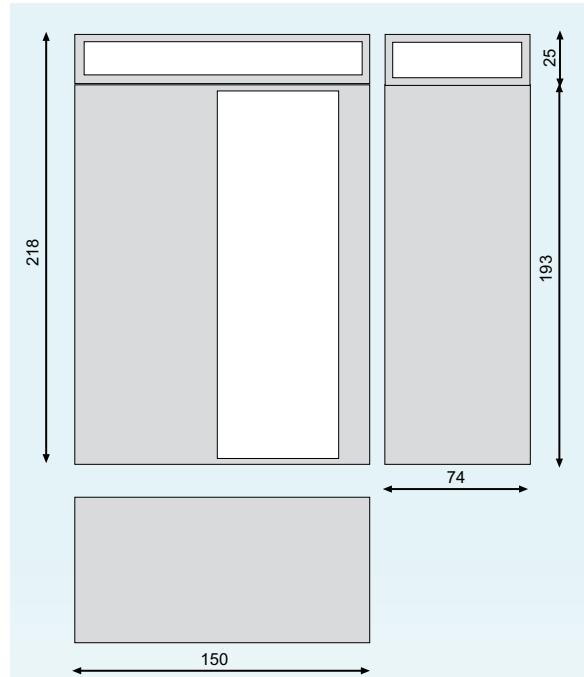

- 24h accessibility
- Printing of ID photos for:
New driving license, ID card,
ICAO standards passport, US Passport
- Print in 7 seconds
